Experiment No-10:

Solved
10/12/21

Experiment Name:

Interfacing HC-SR501 PIR Motion sensor.

Objectives:

- i) To make students familiar with motion sensors and their working principle.
- ii) To make students capable of interfacing motion sensors with MCU in order to detect motion and presence of human beings in a particular environment.

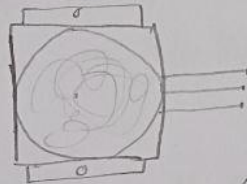

Fig.: HC-SR501 symbol

The PIR motion sensor is ideal to detect movement. PIR stands for "Passive Infrared". Basically, the PIR motion sensor measures infrared light from objects in its field of view. So it can detect motion based on changes in infrared light in the environment. It is ideal for detecting if a person has moved in or out the sensor.
